METHOD AND SYSTEM FOR SELECTING AN
OPERATING SYSTEM AT USER LOGIN ON A TARGET DEVICE

5

ABSTRACT OF THE DISCLOSURE

A method of selecting an operating system at a target device in communication with a server is provided. A network bootstrap program is initiated at the target device

10　　prior to executing an operating system at the target device. The target device sends a bootstrap list command from the target device to the server and receives an operating systems list of at least one operating system. A target operating system is then selected from the operating systems list.
